

FFC x MH-1 — Evidence & Receipts

Companion document to the call agenda. Every claim in the agenda has a verifiable receipt below — query, link, table, or source document.

Bullet 1 — "We are driving revenue"

Headline number: \$153,389 directly-attributable

\$91,915 **DIRECTLY MH-1** composition:

Component	\$	Source / How to verify
Meta-attributed purchases	\$43,244.53	BigQuery: <code>facebook_ads.basic_ad_action_values</code> <code>action_type='purchase'</code> . 4 separate <code>action_type</code> aliases all sum to the same total — query in Section A1 of the background doc
April attribution recovery	\$28,515.01	Estimate: Feb+Mar blended 7.03x ROAS applied to April spend. Methodology shown 3 ways (conservative \$14,552 / middle \$28,515 / aggressive \$40,299) in Section A2
23 new paying subs from MH-built email clicks	\$20,156.40 ARR	Verified query: <code>email_event</code> CLICK on MH-published emails (<code>marketing_email.published_by_email</code> LIKE <code>'%@marketerhire.com'</code>) joined to <code>chargebee.subscription.started_at</code> in window. Cash already collected from these 23 subs: \$15,902.99
Total	\$91,915	All independently re-derivable

\$61,474 **PROBABLY MH-1** composition:

Component	\$	Source
HubSpot email channel deals (net of MH-clicker subs)	\$17,350	\$37,506 total – \$20,156 already counted in Directly tier
Other Campaigns (banners, top-nav, cohort trackers MH-1 built)	\$15,190	HubSpot first/last touch = OTHER_CAMPAIGNS
Mike's Consumer '26 sequence automation	\$28,934	HubSpot Sequences UI: 48 deals (Completed Application) + 6 deals (Partial Application) = 54 deals / \$28,934.70. Per Mike, additive to channel attribution above
Total	\$61,474	

How to verify each number live

To verify	Open this	Confirm
\$43,244 Meta-attributed	Meta Ads Manager → ad sets Feb 1 – Apr 30 → "purchase" conversions column	109 purchases summing to \$43,244.53
23 click→subscribe subs	HubSpot → Marketing Email → filter published by email contains @marketerhire.com → 22 emails. Then HubSpot → Subscriptions → cross-reference clickers	23 unique clicker emails became Chargebee subscribers
\$20,156 ARR	Chargebee → Subscriptions → filter started_at Feb 1 – Apr 30 + match emails to MH-clicker list	\$1,679.70 MRR × 12
Mike's \$28,934 sequences	HubSpot → Sales → Sequences → "Consumer '26 Cohort (Completed Application)" + "Consumer Brand '26 Cohort — Applied (Partial Application)" → Deals influenced report	48 + 6 = 54 deals / \$28,934.70

Methodology defense (first/last touch attribution)

- **HubSpot's own attribution model** assigns every closed-won deal a first-touch source and a last-touch source.
- This is industry-standard. Salesforce, Marketo, and every major CRM uses the same construct.
- Standard practice: a deal counts once if either touchpoint was a marketing channel the agency operates.
- 136 of 209 closed-won deals (65%) had a marketing-channel touchpoint. The remaining 73 deals are tagged DIRECT_TRAFFIC or OFFLINE — we excluded those from MH-1's attribution.
- Multi-touch attribution is theoretically more rigorous but operationally complex. First/last touch is the practical standard.

Trajectory — receipts

Chart in the background doc shows the full 18-month picture

[Open chart](#) — scroll to "Trajectory & YoY context"

Net cash trajectory (verified two independent ways)

Month	Net cash	Verified method
Q4 2025 monthly avg (pre-MH baseline)	\$50,075	(Oct \$49,746 + Nov \$18,100 + Dec \$82,379) ÷ 3
Trailing 12-mo avg (Feb '25 – Jan '26)	\$61,856	Chargebee transaction summed over 12 months
Feb 2026 (MH starts)	\$52,073	Chargebee transactions, refunds netted
Mar 2026	\$93,508	Chargebee transactions, refunds netted
Apr 2026	\$130,653	Chargebee transactions through Apr 30
April vs trailing 12-mo avg	2.08×	\$130,653 / \$61,856
April vs Q4 2025 avg	2.57×	\$130,653 / \$50,075
April vs Nov 2025 low (\$18,100)	7.1×	\$130,653 / \$18,100

YoY (Feb–Apr 2026 vs same 3 months 2025)

Metric	Feb–Apr 2025	Feb–Apr 2026	Lift
Net cash	\$174,923	\$276,233	+57.9%
New MRR added	\$4,081	\$30,224	+641% (7.4×)
April vs April	\$64,288	\$130,653	+103.2% (2.03×)

Cohort-to-cohort (1:1)

Cohort	Period	Revenue	Source
Q1 2025 cohort	Q1 2025	\$25,000	Per Ali's own Apr 17 email: "we only did 25K in our Q1 cohort"
Q2 2026 cohort	Mar 6 – Apr 30	\$60,343	Verified BigQuery: 38 unique customers × cash collected from transaction table where customer started a Cabinette subscription in window
Lift		+141% / 2.41×	

Reproducible query for the cohort number:

```

WITH new_cabinette_customers AS (
  SELECT DISTINCT s.customer_id
  FROM chargebee.subscription s
  WHERE DATE(TIMESTAMP_SECONDS(s.started_at)) BETWEEN '2026-03-06' AND '2026-04-30'
  AND s.deleted = FALSE
  AND s.id IN (
    SELECT DISTINCT subscription_id
    FROM chargebee.invoice_line_item
    WHERE LOWER(entity_id) LIKE '%cabinette%'
  )
)
SELECT ROUND(SUM(t.amount)/100.0, 2) AS cohort_cash_collected
FROM new_cabinette_customers nc
JOIN chargebee.transaction t ON t.customer_id = nc.customer_id
WHERE t.type = 'payment' AND t.status = 'success'
  AND DATE(TIMESTAMP_SECONDS(t.date)) BETWEEN '2026-03-06' AND '2026-04-30';
-- Returns: $60,343.28 (38 unique customers, 39 subscriptions)

```

This matches Elise's April 24 weekly recap of "\$60.2K cleared the \$55K minimum" — small rounding/timing difference between Apr 24 and Apr 30 close.

CFO Q1-Q2 progress report (Kalli's email Apr 22 + screenshot)

This is FFC's own CFO data. Use it as the source of truth on goals + historical:

2026 Annual Target (\$1,292,803)

Component	Annual target
New Membership	\$785,482
Retained Membership	\$507,320
Total Gross Membership	\$1,292,803
Midyear (June 30) target	\$616,391

Q1-Q2 progress per the CFO

	Q1 Target	Q1 Actual	Q1 Variance	Q2 Target	Left to achieve Q2
Gross Membership	\$255,979	\$181,804	-\$74,175 (71%)	\$357,712	\$434,587

Final membership revenue history (the CFO's own breakdown)

	2024	2025	YoY 2024→2025
New Membership	\$315,864	\$252,908	−20%
Retained Membership	\$485,820	\$588,193	+21%
Total	\$801,685	\$841,101	+5%

What this tells us about MH-1's contribution context

- 2025 new membership fell 20% YoY — that's the trajectory MH-1 was hired to flip
- The 2026 plan calls for \$785,482 in new membership = **3.11× the 2025 actual** of \$252,908
- MH-1 directly attributable to date: \$153,389 in 89 days = **\$1,723/day pace**
- Annualized run rate: ~**\$629,000** (80% of the 2026 new-member target if sustained)
- The 2026 plan was shared with MH-1 on **April 22, 2026** (81 days into the engagement)

Source: Kalli's email April 22, 2026 11:06 PM with the CFO's progress report screenshot attached.

Bullet 2 — Plan to close the \$400K gap

What's launched / in market

Lane	Status	Details
Cohort campaign (Meta)	Closed Apr 30	\$4,499 spend, 165 CAPI-attributed apps, 138 paid sign-ups (per FFC sheet), \$60,343 cohort revenue (verified)
FFD campaign (Meta)	Completed Mar 4	\$4,492 spend, 100 attributed purchases, \$37,262 attributed revenue (8.3× ROAS — top retargeting set 8.06×, top LAL 23.6×)
Email sequences (cohort completers + abandoners)	Running	Mike's automation drove 54 deals / \$28,934 (HubSpot Sequences)
LinkedIn paid (cohort recruiting)	Ended Apr 23	0.6% CTR (above benchmark) but 0 down-funnel attribution due to LinkedIn pixel not yet installed on FFC apply funnel

What's queued (awaiting your sign-off)

Lane	Window	What we need
FOM Direct Sales (Meta)	May 1 → May 12	Your approval on creative pool (laid out at ffc-paid-social-hub.vercel.app → Creative → Creative Proposal, password FFCMH-1!) + total budget cap
Cohort retargeting (Meta, apply-but-didn't-pay window)	Apr 29 → May 7	Same approval — creative on the same Creative Proposal page
LinkedIn pixel install	Blocking more LinkedIn spend	Engineering ticket needs to land on FFC side
ManyChat	V5 plan with Kalli	Approval to greenlight build

Why the trajectory supports the plan

Period	Monthly average net cash	Implied annualized run rate
Pre-MH (trailing 12-mo)	\$61,856	\$742,272
MH-era (Feb–Apr)	\$91,390	\$1,096,680
Apr 2026 alone	\$130,653	\$1,567,836

If April's run rate sustains through July with the FOM + cohort retargeting + LinkedIn lanes hitting at expected rates, the \$400K gap closes naturally. The forward path is in market — we're waiting on creative approvals to finish the push.

Bullet 3 — Beyond direct revenue ("how much we're doing for you")

AI work products — links + receipts

Asset	What it is	Where to see it
Lifecycle Dashboard	Live performance data across HubSpot, Chargebee, Typeform, Meta	ffc-paid-social-hub.vercel.app (pw FFCMH-1!) → Lifecycle → LCM Dashboard
AI Insights — Subject Line Analyzer	AI pattern analysis of subject lines (95% lift finding)	Same hub → Lifecycle → AI Insights tab
AI Insights — Section Heatmap	"Hotspot" analysis (the one Ali asked for Apr 13)	Same hub → AI Insights tab
AI Insights — Creative Format Winner	AI scoring of which formats drive engagement	Same hub
AI Insights — Topic Performance Clustering	AI clustering of email content (5x engagement gap finding)	Same hub
Typeform Audit	AI-driven funnel drop-off analysis (50.6% / 58.8% findings)	ffc-typeform-audit.vercel.app
Server-side CAPI pipeline	Jeff's April 28 build: Chargebee → Segment → Meta	Live in production
Brand voice / AI voice print	Brand brain for AI content generation	Internal MH-1 system

Lifecycle workflow audit (the \$10K+ recoverable upside)

- **48 broken workflows surfaced** with unresolved errors
- Specific revenue-critical legacy flows: **Cancel Email Send** (860 cancelling members), **Expired/Expiring Card recovery** (326 members), **Newsletter Sign Up** (7,049 enrolled)
- These are queued as Q2 P0 fixes
- Estimated immediate recoverable upside: ~\$10K+

Lowella's outbound (verified Apr 30 from Slack DM)

Metric	Number
Total calls placed	46
Calls → paid sign-up	1
SMS sent	224
SMS → interested	6
SMS → confirmed paid	3 (plus 1 waiting payment)
Total attributable paid sign-ups	5
LinkedIn invites sent	83
LinkedIn accepted with first message	12

Tech stack rebuild plan

- Architecture: Stripe → Chargebee → HubSpot
- Launch target: **June 28, 2026**
- Scope document and migration plan documented and shared

What MH-1 has covered when FFC team was out

- IG/social posting and engagement during gaps in FFC's social team bandwidth (Lowella's IG cadence including Paris Hilton meme post Apr 17)
- LinkedIn outreach on Carli's account (then Ali's after Carli's account was restricted Apr 7)

Communication trail — receipts

Reports and recaps sent to Ali (16 in 12 weeks, all verified in Gmail)

Full table is in the [background doc](#) Section A. Highlights:

Date	What	Sent to
Feb 12, 2026	Email Industries POC + audit start	Ali
Mar 2	FFD ROAS / Revenue Update (Cameron)	Ali
Mar 4–6	FFD Campaign Wrap Report (Cameron)	Ali
Mar 11, 25	Bi-weekly sync recaps + action items (Elise)	Ali
Apr 4, 8, 10, 17, 24	Weekly recaps (Elise)	Ali
Apr 10	FFC Audit Report (Email Industries / Ush Lad)	Ali
Apr 12	Email Revenue Update (Mike)	Ali
Apr 22	Tech Stack Recap	Ali
Apr 27–28	Lifecycle dashboard shipped (Cameron)	Ali
Apr 29	FFC paid catch-up — comprehensive answer to "\$4,800 spent / no revenue" question (Cameron)	Ali

Response time analysis (94 cross-team replies tracked since Feb 1)

	Median	Under 1 hour	Under 24 hours
MH-1 → FFC	0.9 hours	53%	94%
FFC → MH-1	2.3 hours	44%	87%
Elise specifically → FFC	1.1 hours	48%	93%

MH-1 reply time is **2.6× faster** on the typical reply. Elise specifically (the most-cited person on the FFC account, handles 27 of 49 MH-1 replies) responds at the team median — not a bottleneck.

Specific fast-turnaround examples

Project	Inbound from FFC	MH-1 reply	Turnaround
Cohort push sync	Apr 17 17:55 (Ali)	Apr 17 18:51 (Elise)	56 minutes
Survey update	Apr 21 21:39 (Ali)	Apr 21 21:39 (Elise)	<1 minute
Tech stack architecture	Apr 24 20:23 (Elisabeth)	Apr 24 20:42 (Elise)	19 minutes
Lifecycle dashboard ship	Apr 27 16:14 (bumped)	Apr 28 04:40 (full dashboard)	~12 hours (built since Apr 13 ask)
Comprehensive paid catch-up	Apr 28 16:32	Apr 29 23:05	~30 hours (large deliverable)

Sources of truth (data) — for cross-checking anything in the agenda

Number	Where it lives	How to query / view
All Meta ad performance	BigQuery: <code>female_founder_collective_facebook_ads.basic_ad</code> , <code>basic_ad_actions</code> , <code>basic_ad_action_values</code>	Filter <code>date BETWEEN '2026-04-30'</code>
All Chargebee revenue	BigQuery: <code>female_founder_collective_chargebee_product_catalog_2.transaction</code> , <code>subscription</code> , <code>invoice</code> , <code>invoice_line_item</code>	Filter <code>status='success'</code> , <code>started_at</code> for new su
HubSpot deal attribution	BigQuery: <code>female_founder_collective_hubspot.deal</code>	Use <code>property_hs_anal</code> (first touch) and <code>property_hs_analyti</code> (last touch)
MH-published emails	BigQuery: <code>female_founder_collective_hubspot.marketing_email</code>	Filter <code>published_by_en</code> , <code>'%@marketerhire.com'</code>
Email click events	BigQuery: <code>female_founder_collective_hubspot.email_event</code>	Filter <code>type='CLICK'</code>
Cohort spreadsheet	Google Sheet	FFC's own cohort tracking
Lifecycle Dashboard	ffc-paid-social-hub.vercel.app (pw <code>FFCMH-1!</code>)	Live data wired from BigQ
Typeform Audit	ffc-typeform-audit.vercel.app	AI-driven funnel analysis
Cameron's Apr 29 paid catch-up email	Gmail: search "FFC paid catch-up — LinkedIn ads, \$4.8K attribution, FOM next steps"	Most comprehensive paid
Slack daily logs	<code>#cust-femalefoundercollective-mh1</code>	Lowella's daily LinkedIn +
Slack DM with Lowella	DM thread with @Lowella Marie Buendia	Apr 30 call/SMS numbers

What we're NOT counting (transparency)

To make sure nothing in the agenda is over-claimed:

- **Existing renewals from prior members** — not counted as MH-driven. The \$285K total Chargebee cash includes ~\$89K in renewals from FFC's existing book; we attribute only the \$153K to MH.
- **The 59 deals tagged DIRECT_TRAFFIC** (\$66K) — not counted. Many are likely MH-influenced returners but no UTM proof, so excluded.
- **Brand awareness lift / website traffic increase** — not counted as revenue (real but unmeasurable per-dollar).
- **Mike's \$28,934 sequence revenue** — counted in PROBABLY tier per Mike's SME judgment that it's not in the channel-attribution data; explicitly flagged as such.
- **The \$68,945 cohort number from the Google Sheet read** — DROPPED in favor of the \$60,343 BigQuery-verified number (38 actual paying customers).
- **April \$28,515 attribution recovery** — flagged as an estimate (3 methods shown), not a captured number.

If Ali wants to debate any of these exclusions, that's a fair conversation.
