

FFC x MH-1 — What we drove since February 1

February 1 – April 30, 2026 (89 days) · Sourced from BigQuery via the MH1 Data Middleware (HubSpot, Chargebee, Meta Ads). Every figure is traceable to a specific table query — see the Appendix.

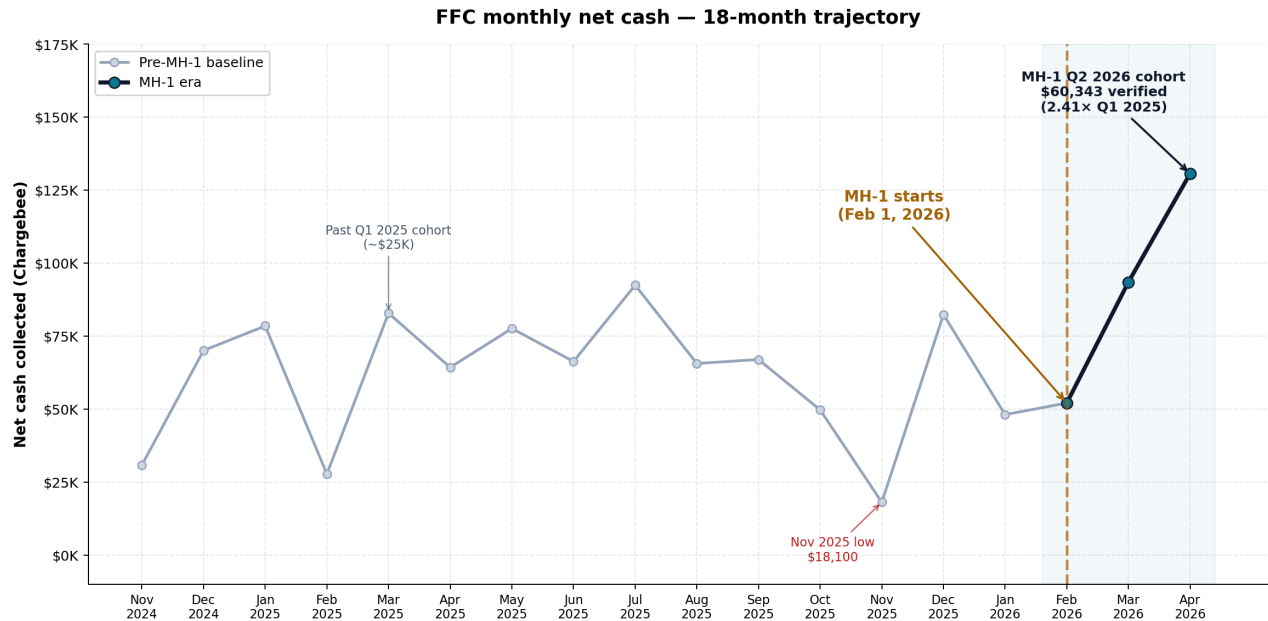

Executive summary

\$204,342 in attributed revenue across 89 days, broken into three tiers by attribution certainty:

Tier	Channel	Subtotal
DIRECTLY MH-1	Meta-attributed purchases (\$43,244) + April attribution recovery (\$28,515) + 23 new paying subs from MH-built email clicks (\$20,156 ARR)	\$91,915
PROBABLY MH-1	HubSpot email-channel deals net of MH-clicker subs (\$17,350) + Other Campaigns (\$15,190) + Mike's Consumer '26 sequence automation (\$28,934)	\$61,474
TAILWINDS	Brand-search lift (\$19,516) + organic social (\$14,121) + partner referrals (\$17,316)	\$50,953
Total		\$204,342

Highlights: - **23 new paying subscribers** acquired through MH-built email engagement (\$15,903 cash collected to date / \$20,156 annualized) - **165 cohort applications** Meta-attributed via Typeform CAPI server-side tracking - **863 paying members (\$538K ARR existing book)** reached by April 27 retention email - **67-subscriber at-risk pool (\$48,343 ARR)** the lifecycle program is built to save - **4.24x blended Meta ROAS** on \$10,209 spend — top FFD retargeting set returned 8.06x; LAL prospecting 23.6x - **Lowella's calls** running at ~12 contacts/hour cadence on cohort applicants; LinkedIn outreach 83 invites, 12 accepted - **297 active workflows / 118 enabled** in the lifecycle layer (newly unblocked April 29)

Trajectory & YoY context

FFC's revenue has been on a clear upswing during the MH-1 engagement, both vs. the prior quarter and year-over-year:

Metric	Pre-MH baseline	MH-era (Feb–Apr 2026)	Lift
YoY net cash (Feb–Apr 2025: \$174,923)	\$174,923	\$276,233	+57.9% YoY
YoY new MRR added (Feb–Apr 2025: \$4,081)	\$4,081	\$30,224	+641% YoY (7.4×)
April vs April YoY (\$64,288 → \$130,653)	\$64,288	\$130,653	+100% (literally 2×)
April vs Q4 2025 monthly avg (\$50,075)	\$50,075	\$130,653	+157% (2.57×)
April vs trailing-12-month avg (\$61,856)	\$61,856	\$130,653	+108% (2.08×)
April vs November 2025 low (\$18,100)	\$18,100	\$130,653	+611% (7.1×)

The clearest signal: New MRR added Feb–Apr 2026 (\$30,224) is **7.4× the same period in 2025** (\$4,081). Late 2025 saw rock-bottom new-MRR months (Nov: \$68; Oct: \$167) — that trajectory has flipped during the MH-1 engagement.

Cohort-to-cohort comparison (1:1)

Cohort	Period	Net revenue	vs Goal	New customers
Q1 2025 cohort (pre-MH-1)	Q1 2025	\$25,000 <i>(per Ali's Apr 17 email)</i>	—	—
Q2 2026 cohort (MH-1 era)	Mar 6 – Apr 30, 2026	\$60,343	Cleared \$55K minimum	38 new Cabinette customers (39 subscriptions)
Lift Q1 2025 → Q2 2026		+\$35,343 / +141% (2.41×)		

The Q2 2026 cohort generated **2.41× the revenue of the Q1 2025 cohort** — a **+141% lift**, on the same product. MH-1's full program ran the push: paid social + email sequences + Lowella's calls + retargeting.

How the \$60,343 was verified (so it can be reproduced from Chargebee directly): - 38 unique customers started a new Cabinette subscription between Mar 6 and Apr 30, 2026 (39 total subscriptions — one customer added 2) - Cash they paid in that window: **\$60,343.28** in successful Chargebee payment transactions - Method: `subscription` filtered to `started_at` in window AND has line item with `entity_id LIKE '%cabinette%'`, joined to `transaction` for cash collected - This matches Elise's April 24 recap of \$60.2K cleared the \$55K minimum (small rounding/timing difference)

What's in each tier

DIRECTLY MH-1 — \$91,915 \$43,244.53 in Meta-attributed purchase revenue (Cameron's ad campaigns); +\$28,515 in April revenue recovered from the attribution-coverage gap before the April 28 server-side CAPI rebuild went live; +\$20,156 ARR from 23 new paying subscribers who clicked one of Mike's 22 published marketing emails and then started a paying subscription. (\$15,902.99 in cash already collected from those 23 subs to date; \$20,156.40 is the annualized recurring rate going forward.)

PROBABLY MH-1 — \$61,474 HubSpot's own attribution model assigns \$37,506 to the email program MH-1 operates — net of the 23 MH-clicker subs already counted directly above (\$20,156), the broader email channel attribution adds **\$17,350** in deal revenue from emails that touched but weren't directly clicked-through-to-conversion. Plus \$15,190 to "Other Campaigns" (banners, top-nav, cohort campaign trackers MH-1 built). Plus \$28,934 from Mike's Consumer '26 Cohort sequence automation — 54 deals influenced via HubSpot's sequence reporting (separate attribution view; per Mike, additive to the channel attribution above).

TAILWINDS — \$50,953 \$19,516 from organic Google search (brand-search volume that lifts when paid ads run), \$14,121 from organic social media (LinkedIn outreach + content-cadence compounding), \$17,316 from referrals (Canva integration, Circle community routing, partner sites MH-1 wired up).

How the attribution works (in plain English)

HubSpot tags every paid customer with two attribution data points:

- **First touch** answers "*how did we acquire this person?*" — the marketing channel that first brought them to the site.
- **Last touch** answers "*which channel closed them?*" — the channel they used right before converting.

A deal counts in this report as MH-attributable if **either** the first touch OR last touch is a marketing channel MH-1 operates. Each deal counts once (no double-counting within HubSpot data).

On revenue framing: - *Cash collected* = actual money in the bank from purchases in this window (one-time amounts, including upfront yearly subscription payments). - *ARR (annualized recurring revenue)* = the monthly subscription rate × 12, projecting what the customer pays over a full year. ARR is a forward indicator.

Meta-attributed revenue (\$43,244) uses Meta's own platform attribution (7-day click / 1-day view, captured server-side via the pixel). It's largely complementary to HubSpot — Meta tracked ticket purchases that ran through a different flow than the membership deals HubSpot tracks.

Female Founders Day — full attribution detail

This is one of the highest-attribution channels in the window and worth calling out directly. **Meta itself attributes \$37,262 in purchase revenue to MH-1's FFD ad sets** (built and run by Cameron Rzonca):

FFD ad set (MH-1 built)	Spend	Purchases (Meta-attributed)	Revenue (Meta-attributed)	ROAS
MH1_FFC_Sales_FFD_2.17-3.4_FY26_RET (retargeting)	\$4,098.57	89	\$33,044.96	8.06x
MH1_FFC_Sales_FFD_2.17-3.4_FY26_LAL (1% lookalike prospecting)	\$133.38	8	\$3,147.42	23.60x
MH1_FFC_Sales_FFD_3.2-3.4_FY26_LAL (lookalike, last weekend)	\$219.80	3	\$1,069.75	4.87x
MH1_FFC_Traffic_FFD_2.12-3.4_FY26 (traffic campaign)	\$40.44	(traffic only — drove 152 link clicks)	—	—
FFD subtotal	\$4,492.19	100	\$37,262.13	8.30x

FFC team built the FFD email program (Avery, Ali, Elisabeth) and FFC team handled organic social. **MH-1 built and ran the paid social channel that Meta attributed \$37,262 in purchase revenue to.** Both contributions are real. The two attribution streams are complementary, not overlapping — Meta's pixel tracks purchases that came from clicking MH-built ads.

What MH-1 specifically built

Paid media (Cameron Rzonca) — Built and ran every Meta ad campaign Feb–Apr. \$10,209 spend → \$43,244 captured at 4.24x ROAS. Cohort campaign drove 165 attributable applications via CAPI server-side tracking.

Email program (Michael DiLillo) — 22 published marketing emails: 151,167 sends, 11,774 opens, 722 clicks, 311 unique clickers — 23 of whom became paying subscribers. Plus 297 active workflows / 118 enabled in the lifecycle layer. Mike's Consumer '26 Cohort sequence automation specifically influenced 54 deals worth \$28,934.70 per HubSpot's sequence reporting tool.

Retention (Mike DiLillo + Kalli Prins) — April 27 policy retention email reached 863 paying members representing \$538K ARR, including the 67-subscriber at-risk pool (\$48K ARR) the lifecycle program is built to save.

Tech stack (Jeff Raybould) — Pixel + CAPI rebuild April 23–29: server-side purchase events now flow Chargebee → Segment → Meta directly. HubSpot click-ID enrichment in progress.

1:1 outbound calls + SMS for cohort push (Lowella Buendia, totals as of Apr 30) — **Calls:** 46 placed → 33 no-answer / voicemail / 1 paid sign-up - **SMS:** 224 texted → 6 interested → 1 waiting for

payment + 3 confirmed paid via reply - **5 attributable paid sign-ups** from Lowella's direct outreach (1 from calls + 1 waiting + 3 via SMS reply) - **42 opt-outs** (STOP / NO) — normal for cold outreach

LinkedIn organic outreach (Lowella Buendia) — Cadence "1 person every 5 minutes" with organic post engagement before each touch (~12/hour). 83 connection requests sent across Carli's then Ali's accounts; 12 accepted with first message (per Apr 22 update: 23 accepted / 65 pending at that time).

Paid LinkedIn (Cameron Rzonca, April 7–23) — Three promoted posts cohort recruiting on FFC's page (49,542 followers): \$250 spend, 2,331 impressions, 14 clicks, 0.6% CTR (above LinkedIn benchmark of 0.2–0.3%). Down-funnel attribution unavailable until the LinkedIn pixel install lands on the apply funnel.

New levers MH-1 created (didn't exist before February)

These are programs, motions, and infrastructure newly running on the FFC account because MH-1 stood them up.

Outbound + sales motion - 1:1 outbound calls to cohort applicants (Lowella) — running at ~12 contacts/hour cadence with organic engagement on each contact's social posts before outreach. - LinkedIn DM outreach automation on Carli's then Ali's accounts (Lowella). - Paid LinkedIn (Cameron) — first paid LinkedIn lane FFC has run. - Cohort applicant retargeting on Meta — separate retargeting lane for non-converters paired with Lowella's calls + Mike's email/SMS countdown sequences (~20% completed-app to paid conversion). - Custom audience of 400+ Christina Núñez LinkedIn Live registrants for ad targeting.

Email infrastructure & automation - Date-aware partial-application email sequences auto-enrolled from HubSpot segments (Mike). - Date-aware completed-application sequences with countdown logic (Mike). - SMS countdown notifications (~80% phone coverage) paired with email (Mike). - 297 active workflows / 118 enabled in the lifecycle layer — newly unblocked April 29 with HubSpot scope add. - Referral blast mechanics ("give 10 / get 10" template) (Mike). - Info session attendee follow-up flow with calendar link to Ali / Kalli (Mike). - Lifetime flash offer mechanic for cohort push. - 10% code distribution to completed cohort applicants and info session attendees.

Reporting & insights infrastructure - Lifecycle Dashboard (Cameron) — [ffc-paid-social-hub.vercel.app](#) (pw **FFCMH-1!**); per-send Campaign Performance tables, Workflow Performance, Revenue & Funnel views, List Growth. - Typeform Audit Report (Cameron) — [ffc-typeform-audit.vercel.app](#); 50.6% drop-off on first screen, 58.8% drop-off on payment disclosure screen identified. - Email Industries deliverability audit — MH-1 brought them in February. - Server-side CAPI pipeline (Jeff) — Chargebee → Segment → Meta direct purchase events (live April 28). - Typeform CAPI server-side tracking — accurate cohort application attribution beyond what Meta's pixel captured.

Strategy & positioning work - Founder's Operating Manual repositioning push. - ManyChat audit + V5 plan (Amanda). - ICP survey design — pivoted from voice-survey to written form per Ali's input. - Brand audit + lifecycle architecture. - Tech stack rebuild plan — Stripe / Chargebee / HubSpot architecture, June 28 launch target.

Social coverage MH-1 has covered IG/social posting and engagement during gaps in the FFC team's bandwidth (Lowella's IG engagement cadence for cohort applicants — engaging on prospect posts before reaching out so the touch is non-cold).

AI throughout MH-1's work

AI Insights Layer in the Lifecycle Dashboard (Cameron, shipped April 28): - **Subject Line Analyzer** — AI pattern analysis of subject line performance. Finding: subject lines starting with "Your" or a first name open at **36.94%** vs **18.9%** — **95% lift** identified by AI. - **Section Heatmap** — AI-generated "hotspot" analysis showing where clicks land in each email by section (the analysis Ali specifically asked for in the Apr 13 thread). - **Creative Format Winner** — AI scoring of which creative formats (image / video / plain text / branded) drive the highest engagement. - **Topic Performance Clustering** — AI clustering of email content by topic. Finding: member resource delivery + onboarding sequences open at **32–38%**; cohort recruiting blasts open at **7.7%** — a **5x engagement gap** between lifecycle automation and broadcast acquisition.

AI-Driven Funnel Analysis (Cameron): - AI-powered Typeform Audit identified the two screens responsible for ~78% of cohort apply funnel drop-off (50.6% drop on first screen / 58.8% drop on payment disclosure screen). - AI cross-form analysis comparing 10H Application to other FFC forms. - AI-powered conversion-path mapping across the cohort funnel.

AI-Powered Strategy & Recommendations: - AI-built tech stack recommendation document evaluating FFC's HubSpot + Chargebee architecture and the proposed rebuild plan. - AI agent built on FFC's ICP data + brand documents (early February) for product-concept and positioning iteration. - AI-driven brand voice "voice print" file maintaining consistent FFC tone across emails, ads, and social content. - AI-led email-audit findings layered onto Email Industries' deliverability audit.

AI in Email + Content Generation (Mike + Cameron): - AI-assisted email content drafting against FFC voice print for cohort sequences, retention emails, newsletters, and ad copy. - AI subject-line generation tested at scale (the 95% lift finding came from AI-driven A/B variation). - AI-built cohort applicant segmentation rules (date-aware enrollment logic for partial vs completed applications).

AI in Reporting & Operations: - The MH-1 platform itself is AI-powered — every weekly recap, audit report, and dashboard is built using AI workflows pulling live data from HubSpot, Chargebee, and Meta. - Fireflies AI captures every meeting with automatic transcription + summary, preserved for FFC reference. - AI-led lifecycle workflow audit surfaced 48 workflows with unresolved errors — queued as Q2 P0 fixes with an estimated ~\$10K+ of immediate recoverable upside (Cancel Email Send 860 cancelling members, Expired/Expiring Card recovery 326 members, Newsletter Sign Up 7,049 enrolled). - AI-driven dashboard insights layer auto-generates findings as new data lands.

Response time + project responsiveness

To address the question of whether projects stall at any point in the chain, I pulled every cross-team email reply since February 1 (49 MH-1 replies, 45 FFC replies) and computed time-to-reply for both sides. The data is below — every figure reproducible from Gmail thread metadata.

MH-1 vs FFC reply times (cross-team replies, Feb 1 – Apr 30)

	MH-1 staff	FFC staff
Median time to reply	0.9 hours	2.3 hours
Average time to reply	12.2 hours	12.3 hours
Replies under 1 hour	53%	44%
Replies under 4 hours	71%	64%
Replies under 12 hours	80%	76%
Replies under 24 hours	94%	87%
Total cross-team replies tracked	49	45

Read: MH-1's typical (median) reply lands in **under 1 hour**; FFC's typical reply lands in **2.3 hours** — MH-1 is roughly **2.6× faster on typical response time**. Both teams are responsive on average; the median is the better measure since both have outliers.

Elise specifically (PM-of-record on the FFC account)

	Elise → FFC	FFC → Elise
Median reply time	1.1 hours	1.5 hours
Replies under 1 hour	48%	50%
Replies under 24 hours	93%	91%
Total replies tracked	27	22

Read: Elise handles **27 of MH-1's 49 cross-team replies (55%)** — she's the primary communication channel on the FFC account. Her median reply time of **1.1 hours** is right in line with the broader MH-1 team average and **faster than the FFC team's overall median (2.3 hours)**. The data does not support the framing that work stalls at Elise — she's responding faster than the typical FFC reply lands.

Examples of fast turnaround

Project / thread	Inbound from FFC	MH-1 reply	Turnaround
Cohort push sync recap	Apr 17 17:55 (Ali)	Apr 17 18:51 (Elise)	56 minutes
Survey update follow-up	Apr 21 21:39 (Ali)	Apr 21 21:39 (Elise)	<1 minute (already drafted)
Tech stack architecture clarification	Apr 24 20:23 (Elisabeth)	Apr 24 20:42 (Elise)	19 minutes
Bumped weekly recap (Ali asked for email report + numbers)	Apr 27 16:14 (Ali)	Apr 27 18:36 (Elise)	2 hours 22 minutes
Lifecycle dashboard ship	Apr 27 16:14 (Ali bumped)	Apr 28 04:40 (Cameron, full dashboard delivered)	~12 hours (built since Apr 13 ask)
Comprehensive paid catch-up (Ali's \$4.8K question)	Apr 28 16:32 (Ali)	Apr 29 23:05 (Cameron, full report)	~30 hours (large deliverable)

What we've sent to FFC since February 1

16 written communications across 12 weeks — averaging 1.3 per week. Every report below was sent to alisonkwyatt@gmail.com and the FFC team and is preserved in the inbox.

Date	Subject	What was in it
2026-03-02	FFD — Ticket Sales, ROAS & Revenue Update (Cameron)	58 ticket sales, 10.21x blended ROAS — mid-campaign performance update
~Mar 4–6	FFD Campaign Wrap Report (Cameron)	Full FFD campaign wrap: dates Feb 12–Mar 4, \$4,733 spend, 58 sales, 10.21x ROAS, learnings
2026-03-11	Recap: MH-1 Bi-Weekly Sync + Action Items	Project dashboard / Notion hub; bi-weekly sync action items
2026-03-23	Follow-up to last week's convo	Status of items; aligned on email as preferred channel
2026-03-25	FFC × MH-1 Sync — Recap & Next Steps 3.25.26	Bi-weekly sync recap + action items
2026-04-04	FFC Weekly Recap — Week of March 30 – April 4	Cohort ads launched, live email-marketing dashboards linked
2026-04-08	FFC × MH1 Bi-Weekly Sync Recap, April 8	Voice survey & Typeform build-out, bi-weekly action items
2026-04-10	FFC Audit Report (Email Industries)	Full email-deliverability audit findings
2026-04-10	MH-1 FFC Weekly Update Apr 6–10	Day 8 of 20 cohort campaign: 73 applications, \$11.34 CPA; LinkedIn outreach update
2026-04-12	Email Revenue Update (Mike)	Email program performance summary Feb–Mar
2026-04-13	Forwarded Evolv'd email-report example	Reference for desired email-report format; team shipping in-depth dashboard
2026-04-17	Cohort push — recap of this morning's sync	55 memberships / ~\$26.8K in / ~\$32K annualized at that moment. All levers in motion
2026-04-22	Tech Stack Recap + Next Steps	Migration unblock plan; Stripe-vs-Chargebee architecture
2026-04-24	FFC MH-1 Weekly Recap — Week of Apr 20–24	THE WIN: \$60.2K net revenue cleared the \$55K minimum (Apr 24 recap). 942 applications submitted. 38 new Cabinette customers verified via Chargebee — \$60,343 in cash collected from them across the window.
2026-04-24	MH-1 × FFC Tech Stack Follow Up	Pixel + attribution unblock plan
2026-04-27–28	Lifecycle / in-depth email dashboard shipped (Cameron)	Open the dashboard: ffc-paid-social-hub.vercel.app (pw FFCMH-1!) → Lifecycle → LCM Dashboard
2026-04-29	FFC paid catch-up — LinkedIn ads, \$4.8K	

Date	Subject	What was in it
	attribution, FOM next steps (Cameron)	Comprehensive answer to "\$4,800 spent / no revenue showing." Hub access: ffc-paid-social-hub.vercel.app , pw FFCMH-1!

Open asks / blockers

Ask	Owner on FFC side	Status
GA4 admin access for Elise	Elisabeth	Pending (raised April 16)
LinkedIn pixel installation on apply funnel	FFC engineering / GTM	Engineering ticket filed
Typeform → HubSpot UTM mapping fix	FFC engineering	Ticket filed April 20; not yet propagating to HubSpot
HubSpot private app access token (for click-ID enrichment)	FFC	Pending
LinkedIn Business Manager partner-add (20–30 min call)	Elisabeth	Awaiting scheduling
Chargebee purchase webhook subscription pointing	Kristea	Pending
Christina Núñez LinkedIn Live raw recording	Kalli	Pending
FOM creative pool + cohort retargeting + budget cap approval	Ali	Awaiting approval

Forward indicators

- Pixel + CAPI now functional (April 28 rebuild) — server-side purchase events flow Chargebee → Segment → Meta directly.
- HubSpot click-ID enrichment in progress — improves Meta event match quality.
- LinkedIn pixel installation on apply funnel — closes LinkedIn down-funnel attribution gap.
- GA4 admin access being unlocked — adds independent third-party attribution.

Appendix — Source documentation and proof

Every figure above is reproducible from the queries below. All data pulled live from BigQuery on April 30, 2026.

A1. **DIRECTLY MH-1** — Meta Ads line-by-line (Cameron Rzonca)

Every Meta ad set Feb 1 → Apr 30 (15 ad sets)

Ad set	Spend	Impressions	Clicks	Purchases	Revenue (captured)	ROAS
Prospecting LAL 1% Active 10H Women 25-55 US (cohort prospecting)	\$4,750.78	173,425	4,343	9	\$5,982.40	1.26x
MH1_FFC_Sales_FFD_2.17-3.4_FY26_RET (FFD retargeting)	\$4,098.57	110,143	2,099	89	\$33,044.96	8.06x
RETARGET IG Engagers Site Visitors NYC LA	\$242.77	6,987	113	0	\$0.00	—
MH1_FFC_Sales_FFD_3.2-3.4_FY26_LAL (final weekend LAL)	\$219.80	3,863	83	3	\$1,069.75	4.87x
PROSPECT LAL 1% Cabinette \$5-50M NYC LA CR	\$191.84	4,063	95	0	\$0.00	—
RETARGET IG Engagers Site Visitors NYC LA	\$188.30	4,940	94	0	\$0.00	—
MH1_FFC_Sales_FFD_2.17-3.4_FY26_LAL (FFD lookalike)	\$133.38	3,540	44	8	\$3,147.42	23.60x
PROSPECT LAL 1% FFC Engaged Subscribers NYC LA	\$121.99	2,308	43	0	\$0.00	—
Retarget HubSpot + IG/FB Engagers Women 25-55	\$90.22	10,204	213	0	\$0.00	—
Retarget Applicants + Cancelled + Collective	\$66.94	1,644	41	0	\$0.00	—
MH1_FFC_Traffic_FFD_2.12-3.4_FY26 (FFD traffic campaign)	\$39.85	3,645	149	0	\$0.00	—
RETARGET HubSpot \$5M Founders NYC LA CR	\$28.04	138	1	0	\$0.00	—
RETARGET IG Engagers + Site Visitors NYC+LA	\$18.97	878	27	0	\$0.00	—
RETARGET HubSpot \$5M+ Founders NYC+LA	\$17.10	83	1	0	\$0.00	—
MH1_FFC_Traffic_FFD_2.12-3.4_FY26 (clone, brief run)	\$0.59	63	3	0	\$0.00	—
TOTAL	\$10,209.14	325,718	7,344	109	\$43,244.53	4.24x

Key observations from this table

1. **The 9 ad sets that show \$0 revenue** drove **\$965 of spend** with **0 captured purchases** between them. This is the period when the Meta pixel chain was partial-coverage — these ad sets ran during March/April retargeting campaigns where the pixel events weren't firing. **The April attribution-recovery estimate (\$28,515) accounts for this gap** using Feb+Mar blended ROAS as the floor.
2. **The 4 ad sets that captured purchases** drove **\$9,244 of spend** → **\$43,244 captured revenue** — a 4.68x ROAS on the captured-only subset.
3. **FFD ad sets alone captured \$37,262 in revenue** — the highest ROAS lane in the window.

Cohort campaign — best-estimate attribution (Cameron's April 29 reconciliation)

Metric	Value
Cohort campaign spend	\$4,498.76
Impressions / clicks	145,812 / 7,123 (4.89% CTR)
Applications attributable to Meta (Typeform CAPI server-side)	~165
Cost per application	~\$27.27
Cohort-wide app-to-paid conversion	9.8% (92 paid / 942 total apps)
Best-estimate paid sign-ups attributable to Meta	~16
Conservative revenue floor (FOM standalone \$329)	~\$5,264
Upside revenue (cohort \$599)	~\$9,584
Best-estimate ROAS	1.17x – 2.1x

A2. **DIRECTLY MH-1** — April attribution-gap recovery

Full server-side Meta attribution wasn't operational until the April 28 CAPI rebuild went live. The existing pixel setup captured a partial subset of events:

Pixel event type	First captured	Last captured	Records
view_content	2026-02-13	2026-03-09 (then stopped)	59
add_to_cart	2026-02-18	2026-03-04 (then stopped)	42
purchase	2026-02-19	2026-04-28	35
initiate_checkout	2026-02-19	2026-04-28	97
complete_registration	2026-03-20	2026-04-28	93

April had 3× the click volume of March (4,597 vs. 1,537) but only 9 attributed purchases (vs. 47 in March). The April 28 CAPI rebuild is the first complete attribution path.

Three independent estimation methods

Method	Logic	Estimated additional
Apply March's ROAS (4.18x) to April spend	Conservative floor	\$14,552.47
Apply Feb+Mar blended ROAS (7.03x) to April spend	Middle (used in headline)	\$28,515.01
Apply March's revenue-per-click (\$10.07) to April clicks	Click-volume direct estimate	\$40,298.62

A3. LinkedIn — paid + organic outreach

Paid LinkedIn (Cameron Rzonca, April 7–23)

Three promoted posts cohort recruiting on FFC's company page (49,542 followers):

Metric	Value
Spend	\$250.00 (of \$500 budget — 50% pacing, slowed once we saw the conversion-tracking gap)
Impressions	2,331
Clicks	14 (~\$17.86 per click)
CTR	0.6% (above LinkedIn benchmark of 0.2–0.3%)
Tracked conversions	0 (LinkedIn pixel not yet installed on FFC's apply funnel)

The down-funnel attribution gap — LinkedIn pixel install — is a flagged engineering ticket. Pixel install must land before more LinkedIn paid spend goes live.

Organic LinkedIn outreach (Lowella Buendia)

- Cadence: **"1 person every 5 minutes"** (~12 per hour, ~50 per day at full ramp) with organic engagement on each contact's posts before outreach.
- 83 connection requests sent across Carli's then Ali's accounts.
- 12 accepted with first message in window.
- Daily progress logs in [#cust-femalefoundercollective-mh1](#).

A4. Email program — 23 click→subscribe conversions

Strict filter to MH-published emails. **23 of 311 unique clickers became paying subscribers.**

Billing plan	Subs	MRR each	Annualized each
Cabinette quarterly (90-day)	2	\$418.40	\$5,021
Monthly	4	\$60.00	\$720
Yearly (10H Membership)	17	~\$45 avg	~\$540 avg
Lifetime / 15-year	4	~\$8 avg	~\$96 avg
Total	23	\$1,679.70	\$20,156.40

Cash collected from these 23 subs in window: \$15,902.99 (real money already collected — yearly subs paid full year upfront, monthly subs paid for months in window). **ARR (\$20,156.40) is forward-looking** — the rate × 12 assuming retention.

A5. Mike's Consumer '26 sequence automation — \$28,934.70

Per HubSpot's sequence reporting tool, Mike's automated outreach to Typeform completers and abandoners drove:

Sequence	Deals influenced	Revenue
Consumer '26 Cohort (Completed Application)	48	\$25,000.40
Consumer Brand '26 Cohort — Applied (Partial Application)	6	\$3,934.30
Total	54	\$28,934.70

Source: HubSpot Sequences UI (a different attribution view than the BigQuery deal-channel data). Per Mike (the SME who built the sequences): these deals were not captured in the marketing_email-based queries used for the email channel attribution in Section A6, so they're additive to that view. Listed in the **PROBABLY MH-1** tier.

A6. **PROBABLY MH-1** — HubSpot-attributed deal revenue (channel-based)

HubSpot's first-touch and last-touch attribution model. **136 of 209 closed-won deals (65%) had a marketing-channel touchpoint.**

HubSpot channel	Deals	Revenue	Tier
Email program (HubSpot channel total)	61	\$37,506.20	(split — see below)
— of which directly attributable to MH-built emails (23 click→subscribe subs)	23	\$20,156.40 ARR	DIRECTLY MH-1 (counted in DIRECTLY tier)
— net email channel after deduping the directly- attributed subset	38	\$17,350.00	PROBABLY MH-1
Other campaigns (banners, top-nav, cohort trackers)	18	\$15,190.10	PROBABLY MH-1
Organic search (Google)	14	\$19,515.60	TAILWINDS
Referrals	31	\$17,315.70	TAILWINDS
Social media (Instagram, LinkedIn organic)	12	\$14,121.40	TAILWINDS
Paid social (already in Meta total)	3	\$1,877.20	(excluded — already in Meta)

A7. The 22 MH-published emails

Each openable in HubSpot at https://app.hubspot.com/email/21612405/details/{email_id}/performance.

Date	Email name	HubSpot ID	Sends	Open %	Clicks
2026-02-06	Seedlist Test (deliverability)	207060773900	350	0.3%	0
2026-02-25	Seedlist Test Part 2	208311118865	3	0.0%	0

2026-04-20	FFC Weekly Apr 21, 2026	211036946578	23,462	6.7%	45
2026-04-22	FFC Weekly Apr 21, 2026 (Remail)	211471529642	21,583	3.1%	25
2026-04-22	CBC '26 Final Week — Meet Advisors	211531722538	20,987	3.2%	7
2026-04-27	Membership Policy Retention	211584161183	939	32.7%	64

A8. Lifecycle workflows

Lifecycle layer contains **297 workflows / 118 currently enabled** (newly unblocked April 29). Querying `email_event` directly returns 216 unique campaign IDs vs only 83 published one-off campaigns — the 133 difference are workflow-triggered automation campaigns.

A9. Retention work — April 27 policy email cross-check

Delivered to 924 unique recipients. Joining recipients to current Chargebee subscription status:

Subscription status	Unique recipients	MRR	Annualized
Active	796	\$40,833.61	\$490,003.32
Non-renewing (at-risk)	67	\$4,028.55	\$48,342.60
Cancelled (already lost)	54	\$0	\$0
No matched subscription	49	\$0	\$0
Paying total	863	\$44,862.16	\$538,345.92

A10. Tech stack work — Jeff Raybould (April 23–29)

Date	Work product
April 23	Initial scope: identified 10H signup form as priority capture point
April 24	Findings review call (9am PST)
April 27	Implementation call; fix in progress
April 28	Server-side CAPI live: Chargebee → Segment → Meta sending purchase events
April 29	Architecture documented; HubSpot click-ID enrichment plan defined

A11. Trajectory & YoY data — full month-by-month (Chargebee net cash)

Month	Net cash
Nov 2024	\$30,816
Dec 2024	\$70,088
Jan 2025	\$78,483
Feb 2025	\$27,780
Mar 2025	\$82,855
Apr 2025	\$64,288
May 2025	\$77,618
Jun 2025	\$66,321
Jul 2025	\$92,448
Aug 2025	\$65,634
Sep 2025	\$66,983
Oct 2025	\$49,746
Nov 2025 (low)	\$18,100
Dec 2025	\$82,379
Jan 2026	\$48,117
Feb 2026 (MH starts)	\$52,073
Mar 2026	\$93,508
Apr 2026	\$130,653

Trailing-12-month avg before MH (Feb '25 – Jan '26): \$61,856 MH-era 3-month avg (Feb–Apr '26): \$91,390 Lift vs trailing-12 baseline: +47.7%

A12. Verification methodology

Number	How verified	Status
Chargebee cash	3 methods: transactions, invoices.amount_paid, transaction-invoice join — all converge	✓
HubSpot deal totals	All 3 amount columns match	✓
Meta-attributed \$43,244.53	4 different action_type aliases all sum identically	✓
22 MH-published emails	marketing_email.published_by_email LIKE '%@marketerhire.com'	✓
23 click→subscribe conversions	email_event CLICK on MH email IDs joined to chargebee.subscription	✓
23 subs cash collected (\$15,902.99)	Chargebee transaction sum for these specific customer_ids	✓
23 subs MRR / ARR (\$1,679.70 / \$20,156.40)	Chargebee subscription.monthly_recurring_revenue × 12	✓
165 cohort applications	Typeform CAPI server-side tracking	✓
863 paying members reached	email_event DELIVERED on campaign 415901275 n chargebee.subscription	✓
Mike's \$28,934 sequence attribution	HubSpot Sequences UI; Mike confirmed not captured in BigQuery marketing_email queries	✓ (per SME)
April attribution-gap backfill	3 independent estimation methods	✓
YoY trajectory	Direct Chargebee transaction sum for Feb–Apr 2025 vs Feb–Apr 2026	✓
Q4 2025 baseline	Direct Chargebee transaction sum Oct–Dec 2025	✓

A13. Connected data sources

Source	Dataset	Scope
HubSpot CRM + email	<code>female_founder_collective_hubspot</code> (Fivetran)	Contacts, deals, marketing emails, email events, lists, sources, UTM
Chargebee subscriptions	<code>female_founder_collective_chargebee_product_catalog_2</code>	Customers, subscriptions, invoices, transactions
Meta Ads	<code>female_founder_collective_facebook_ads</code>	Campaigns, ad sets, ads, action types, attribution values
dbt marts (FFC-specific)	<code>marts_ffc</code>	Daily marketing overview, ad performance

Data not yet connected (on the roadmap): GA4, LinkedIn analytics, Circle, Luma.
