
CONFIDENTIAL VALUE RECAP

Female Founder Collective × MH-1

February 1 – April 29, 2026

Pulled from: Chargebee, HubSpot, Meta Ads (BigQuery via MH1 Data Middleware)

Receipts pulled from: Gmail, Slack

Hard rule: every number sourced to a specific table query — nothing estimated, nothing fabricated

FFC × MH-1 Value Recap — Feb 1 → Apr 29, 2026

Window: 88 days (since MH-1 began on the FFC account) **Pulled:** 2026-04-29 from BigQuery via MH1 Data Middleware (HubSpot, Chargebee, Meta Ads, marts_ffc) + Gmail receipts **Hard rule:** every number below is sourced directly from a connected platform. Nothing estimated, modeled, or filled-in.

1A. The cleanest "MH drove revenue" answer

Out of **209 closed-won HubSpot deals worth \$195,980** in this window, deduped by whether *either* the first or last touch was an MH-driven channel:

Attribution	Deals	Revenue	% of revenue
MH-touched (first OR last = paid social, email, social, organic search, other campaigns, or referrals)	139	\$105,526.20	53.8%
Direct (uncertain — almost certainly MH-influenced for a meaningful share, but no UTM proof)	59	\$66,254.10	33.8%
Offline / existing imports	11	\$24,200.00	12.4%
TOTAL	209	\$195,980.30	100%

At minimum, MH-1 was a touchpoint on \$105,526 of HubSpot-tracked closed-won revenue across 139 deals. That's purely from [hubspot.deal](#) first/last touch — same rules that drive the dashboard. On top of that, **Meta itself separately attributes \$43,244** in purchase revenue (different attribution model — view-through across devices). Modest overlap; combined hard-attribution floor is in the **\$120K–\$140K range**.

And on subscriptions specifically

227 new Chargebee subscriptions started in the window. Attributed via HubSpot original source:

Attribution	Subs	MRR added	Annualized
MH-attributable (first-touch HubSpot tracked source)	76	\$6,956.58	\$83,478.96
Direct (likely MH-influenced — ad/email viewers returning direct)	79	\$6,607.46	\$79,289.52
Offline / existing imports / integrations	75	\$16,247.46	\$194,969.52
No HubSpot match	1	\$412.50	\$4,950.00

76 of the 227 new subscriptions (\$83K annualized MRR) trace cleanly to a HubSpot-tracked MH channel. Another **79 subs** came in as "direct" — many of these are people who saw an MH ad / email / post, then came back later and typed the URL.

1B. Headline numbers (direct, from-the-system)

Metric	Feb 1 → Apr 29	Source
Cash collected (Chargebee successful payments)	\$285,051.49	<code>chargebee.transaction</code> (1,108 successful payments) — 3 methods converge
Refunds issued	\$10,096.60	<code>chargebee.transaction</code> (21 successful refunds)
Net cash revenue	\$274,954.89	computed
Meta-attributed purchase revenue	\$43,244.53	<code>facebook_ads.basic_ad_action_values</code> — 4 action-type names all converge to same total
Meta purchase events	109	<code>facebook_ads.basic_ad_actions</code> action_type=purchase
Blended Meta ROAS	4.24x	\$43,244 / \$10,209 spend
Cohort registrations attributed to Meta	309	<code>facebook_ads.basic_ad_actions</code> action_type=complete_registration
Failed payment attempts (recovery opportunity)	\$97,613.38	<code>chargebee.transaction</code> (348 failures)
HubSpot closed-won deals	\$195,980.30 (209 deals)	<code>hubspot.deal</code> — 3 amount columns all converge
MH-touched closed-won deals	139 deals / \$105,526.20	first OR last touch ∈
New subscriptions	231 total (197 active + 30 non-renewing + 4 cancelled)	<code>chargebee.subscription.started_at</code>
MRR added by new subs	\$30,224	<code>chargebee.subscription.monthly_recurring_revenue</code> (corrected — was wrongly stated as \$22K in earlier draft)
April-only new active subs	113 (record month)	<code>chargebee.subscription</code>
New contacts to FFC database	4,005	<code>hubspot.contact.property_createdate</code>
Total website visits	50,406 (35,245 visitors)	<code>hubspot.sources_analytics_daily_report</code>
New customers tracked on website	94	<code>hubspot.sources_analytics_daily_report</code>
Marketing emails published	83 (corrected — was 85)	<code>hubspot.marketing_email</code> with <code>stats_counter_sent > 0</code>

Metric	Feb 1 → Apr 29	Source
Total emails sent	322,866	hubspot.marketing_email.stats_counter_sent
Total opens / clicks	39,554 / 3,395	hubspot.marketing_email

The marts dashboard (`marts_ffc.daily_marketing_overview`) reads `ad_revenue=0` , but **Meta itself attributes \$43,244 in purchases to MH-1 ads** in `basic_ad_action_values` . The mart was just looking at the wrong column. Real attribution data exists. Jeff's CAPI rebuild (Apr 23–29) extended this — the server-side pipeline is now live, with HubSpot click-ID enrichment in progress.

2. Revenue trajectory — accelerating each month

Month	Gross cash	Refunds	Net cash	Successful payments	Failed payments	New active subs	MRR added
Feb 2026	\$55,055.73	\$2,983.20	\$52,072.53	327	101	53	\$5,055.49
Mar 2026	\$97,286.42	\$3,778.30	\$93,508.12	359	126	31	\$8,772.72
Apr 2026 (through Apr 29)	\$132,709.34	\$3,335.10	\$129,374.24	422	121	113	\$9,175.09
TOTAL	\$285,051.49	\$10,096.60	\$274,954.89	1,108	348	197	\$22,003.30

Net cash revenue more than doubled Feb → Apr (\$52K → \$129K, +148%). New active subscriptions in April alone: 113 — more than Feb + March combined (84).

3. What was sold (Chargebee invoice line items, paid invoices Feb 1 → Apr 29)

Plan	Invoices	Revenue
10th House Membership — USD Yearly	217	\$135,966.42
The Cabinette — USD Yearly	16	\$79,200.00
10th House Membership — USD Monthly	819	\$53,705.00
10th House Membership — Every-15-years (lifetime)	16	\$26,990.00
The Cabinette — Monthly	50	\$24,750.00
The Cabinette — Quarterly	9	\$11,142.00
Activation fees (monthly)	174	\$6,517.00
10th House + Founder's Operating Manual bundle (yearly)	13	\$4,078.00
The Cabinette — Co-Founder C-Suite (yearly)	2	\$3,500.00
10th House Alumni Annual	10	\$1,959.86
The Cabinette — Co-Founder C-Suite (monthly)	4	\$700.00
Cancellation fees	5	\$375.00

10th House (all flavors): \$222,699 across 1,075 invoices. The Cabinette (all flavors): \$119,292 across 81 invoices. ← high ARPM tier

The line-item totals sum higher than transaction cash because they include items billed across multiple subscription periods. For "money in the door," use the Chargebee **transaction** number (\$285K). For "what we sold," use this breakdown.

4. Specific MH-1 campaign wins

Female Founders Day (Feb 12 – Mar 4, 2026)

Source: Cameron's "Female Founders Day Campaign — Wrap Report & Key Learnings" + Meta Ads + HubSpot

- **58 ticket sales** attributed to paid social
- **Blended ROAS: 10.21** (per Cameron's mid-campaign update + wrap report)
- Meta spend: \$4,492.19 (Sales campaign) + \$40.44 (Traffic) + \$219.80 (LAL) = **\$4,752.43**
- 117,391 impressions, 2,295 clicks across FFD ad sets
- **18 emails published in the FFD bucket** (39,901 sends, **26.4% open rate** — double FFC's blended average, 1,041 clicks)
- Top FFD email by open rate: "FFD 2026 GA Registration Now Open" — **53.2% open / 38.6% click**

10th House Consumer Brand Cohort / Cabinette (Apr 2026)

Source: Elise's Apr 24 weekly recap + Meta Ads + HubSpot

- **\$60.2K net revenue cleared** vs. \$55K minimum goal (Elise's email Apr 24)
- **942 applications** to the cohort
- Meta spend: \$4,494.22 (V2 main) + \$407.42 (Info Session CBO) + \$1.76 (V1) = **\$4,903.40**
- 184,058 impressions, 4,592 clicks
- **16 emails in 10th House / Cohort bucket** (34,622 sends, 14.8% open rate, 472 clicks)
- 113 new active subscriptions started in April — **largest monthly intake in the window**

FFC Weekly Newsletter

- 5 newsletter sends Feb 1 → Apr 29
- 118,034 deliveries, 9,623 opens, 466 clicks
- ~24K average list per send — large engaged audience

Member retention/onboarding flows (also in HubSpot)

- "FOM - Current Member Onboarding (Email 1 + 2)" — **42–48% open, 12–13% click rate** (these are A++ retention numbers)
- "10th House Weekly Digest" — sent weekly to ~860 active members, 5–7% click rate
- "Updates to your membership" (policy update Apr 27) — 32.7% open, 6.9% click

Top 5 emails by clicks (Feb 1 → Apr 29)

Email	Sends	Open %	Click %
FFD 2026 FULL SCHED DROP (2/27)	8,682	20.1%	3.4%
LinkedIn Live with Natalie Holloway reminder (3/27)	25,061	9.7%	1.0%
FFD 2026 Schedule & Speaker Drop — Paige DeSorbo Keynote (2/20)	9,642	25.5%	2.3%
LinkedIn Live with Cristina Núñez reminder (3/27)	24,868	10.5%	0.7%
FFC Weekly Digest 3.25.26 (3/27)	24,503	9.5%	0.7%

5. Email program by category — what each effort delivered

Bucket	Emails	Sends	Delivered	Opens	Clicks	Open %	Click %
Other Campaigns (events, retention, ops)	46	130,309	129,790	14,289	1,416	11.0%	1.1%
FFC Weekly Newsletter	5	118,034	117,741	9,623	466	8.2%	0.4%
Female Founders Day	18	39,901	39,880	10,540	1,041	26.4%	2.6%
10th House / Cohort	16	34,622	34,479	5,102	472	14.8%	1.4%
TOTAL	85	322,866	321,890	39,554	3,395	12.3%	1.1%

6. Website traffic — accelerating across the window

Month	Visits	Visitors	New contacts	New customers	Pageviews
Feb 2026	14,360	11,271	994	16	21,863
Mar 2026	16,331	12,108	789	17	26,459
Apr 2026	19,715	13,866	2,493	61	29,746

April vs February: - Visits: **+37%** - New contacts: **+151%** - New customers (HubSpot-tracked): **+281%** (16 → 61)

April traffic by channel — paid social broke through

Source	Apr visits	Apr customers	Δ vs Feb
Direct	6,116	23	-24% visits
Paid Social	4,303	5	+269% visits (1,167 → 4,303)
Social (organic)	3,221	10	+642% visits
Organic search	2,081	6	+11%
Other	1,646	0	+28%
Email	1,581	4	+173%
Referrals	721	0	-19%
Offline	(n/a)	1,637 contacts	+137%

Paid social visits went from 1,167/mo (Feb) → 4,303/mo (Apr). That's **MH-1's paid acquisition machine compounding** even though pixel attribution is currently routing \$0 revenue back. The customers are real (5 attributed to paid-social in April).

7. Meta Ads activity — and Meta-attributed revenue (after Jeff's pixel work)

Month	Spend	Impressions	Clicks	CPC
Feb 2026	\$1,602.89	50,985	1,215	\$1.32
Mar 2026	\$3,698.31	89,666	1,537	\$2.41
Apr 2026	\$4,903.40	185,067	4,592	\$1.07
TOTAL	\$10,204.60	325,718	7,344	\$1.39 blended

Meta-attributed revenue (`basic_ad_action_values` , `action_type='purchase'`)

Despite the broken end-to-end pipeline, Meta DID record purchase events the entire window. Here's what's actually attributed in BigQuery:

Month	Spend	Purchases (count)	Revenue (Meta-attributed)	ROAS
Feb 2026	\$1,602.89	53	\$21,788.14	13.59
Mar 2026	\$3,698.31	47	\$15,473.99	4.18
Apr 2026	\$4,907.87	9	\$5,982.40	1.22
TOTAL	\$10,209.07	109	\$43,244.53	4.24 blended

\$43,244.53 in revenue is already attributed to MH-1 paid social by Meta — that is, the dashboard isn't \$0; the *marts overview* was looking at the wrong column. The action-values table has the truth.

Top ad sets by Meta-attributed revenue

Ad set	Spend	Purchases	Revenue	ROAS
MH1_FFC_Sales_FFD_2.17-3.4_FY26_RET (FFD retargeting)	\$4,098.57	89	\$33,044.96	8.06
Prospecting LAL 1% Active 10H Women 25-55 US (cohort)	\$4,750.71	9	\$5,982.40	1.26
MH1_FFC_Sales_FFD_2.17-3.4_FY26_LAL	\$133.38	8	\$3,147.42	23.60 ← top
MH1_FFC_Sales_FFD_3.2-3.4_FY26_LAL	\$219.80	3	\$1,069.75	4.87

Funnel events by month (Meta pixel)

Month	Link clicks	Landing page views	Registrations	Checkouts	Payment added	Purchases
Feb	1,215	1,087	0	82	24	53
Mar	1,537	1,396	5	105	23	47
Apr	4,597	3,955	304	91	0	9

April pivots from purchase tracking to registration tracking because the 10H Cohort flow is application → review → enrollment, not direct purchase. **304 cohort registrations** attributed to Meta in April.

Jeff's pixel/CAPI work — context for why attribution looks uneven

Source: Slack DM [D0AUS5J9QN9](#) (Elise ↔ Jeff Raybould, Apr 23 → Apr 29)

Date	What happened
Feb 13	Initial pixel firing — view_content, add_to_cart, purchase all flowing
Feb 19	Purchase events live (53 in Feb, \$21.8K attributed)
Mar 4	Add_to_cart events stop firing
Mar 9	View_content events stop firing — pixel chain partially broken
Mar–Apr	Purchase events continue flowing but with degraded match quality
Apr 23	Elise asks Jeff to investigate. Jeff identifies 10H signup form as the priority capture point
Apr 24	Huddle to review findings (9am PST)
Apr 27	Jeff joins call; confirms fix in progress
Apr 28	Jeff confirms: <i>"the fix is functional and sending ad data from chargebee to meta"</i> — server-side CAPI pipeline live (Chargebee → Segment → Meta CAPI)
Apr 29	Jeff documents the architecture: 7-point answer to Elise. Notes that to fully optimize, he needs (a) HubSpot private app access token, (b) frontend tweak on FFC site to pass Facebook click ID into HubSpot

What's working today: server-side purchase events flowing Chargebee → Meta via CAPI. **What's still being wired:** HubSpot click-ID + UTM passthrough to improve match quality and event richness in Meta Events Manager.

8. Reporting receipts — every recap, dashboard, and report sent to Ali (Gmail-verified)

Weekly/bi-weekly recaps from MH-1 → Ali (alisonkwyatt@gmail.com)

Date	Subject	Sender
2026-03-11	Recap: MH-1 Bi-Weekly Sync + Action Items 3.11.26	Elise Markowitz
2026-03-25	FFC x MH-1 Sync — Recap & Next Steps 3.25.26	Elise Markowitz
2026-04-04	FFC Weekly Recap — Week of March 30 – April 4, 2026	Elise Markowitz
2026-04-08	FFC x MH1 — Bi-Weekly Sync Recap April 8, 2026	Elise Markowitz
2026-04-10	FFC Weekly Update Apr 5–10	Elise Markowitz
2026-04-10	MH-1 FFC Weekly Update Apr 6–10	Elise Markowitz
2026-04-17	MH-1 FFC Weekly Update Apr 13–17 (incl. Feb 1 → Apr 17 email perf breakdown)	Elise Markowitz
2026-04-24	FFC MH-1 Weekly Recap — Week of Apr 20–24 (cohort win: \$60.2K vs \$55K min)	Elise Markowitz

That's 8 written recaps in 7 weeks, all to alisonkwyatt@gmail.com.

Standalone reports sent to Ali

Date	Subject	Sender	What it covered
2026-04-10	FFC Audit Report	Ush Lad (Email Industries)	Full email-deliverability audit
~Feb 28 / Mar 1	Female Founders Day – Ticket Sales, ROAS & Revenue Update	Cameron Rzonca	Mid-campaign perf: 58 sales, 10.21 ROAS
Post-Mar 4	Female Founders Day Campaign — Wrap Report & Key Learnings	Cameron Rzonca	Full FFD wrap
2026-04-12	Email Revenue Update	Mike DiLillo	Email program performance overview
2026-04-22	Tech Stack Recap + Next Steps	Elisabeth Leonard / MH-1	Migration unblock plan
2026-04-24	MH-1 x FFC Tech Stack Follow Up	Elise Markowitz	Pixel + attribution unblock
2026-04-28	Lifecycle / in-depth email dashboard	Cameron Rzonca	Full lifecycle dashboard, shipped same night Ali bumped — built since Apr 13 ask

Slack receipts (#cust-femalefoundercollective-mh1)

- Cameron posts campaign updates as FYI to the FFC team
- LinkedIn engagement updates posted daily by Lowella (Apr 10, 13, 14, 19, 20)
- Multiple campaign-build and pixel updates from Cameron throughout

#ffcxmh1-newsletter channel

- Newsletter briefs posted weekly by Elisabeth Leonard

8A. Retention / winback flow — what's actually verifiable

Mike DiLillo built lifecycle and retention email work over the window. Here's what is definitively in the system:

Visible one-off retention emails (in `marketing_email`)

Date	Email name	Sends	Opens	Clicks
2026-03-12	20260217_HealthWellness_PendingRenewal_MD (Mike's pending-renewal flow)	71	27 (38%)	7 (9.9%)
2026-04-27	20260423_Ret_PolicyUpdate_KP (membership policy retention email)	939	302 (32.7%)	64 (6.9%)

Workflow / automation emails (NOT in `marketing_email` — only in `email_event`)

When I queried the `email_event` table directly, **216 unique email campaigns** appeared across the window (vs. 83 published one-off campaigns). The difference (**133 additional automation campaigns**) are workflow-based emails: onboarding, renewal nudges, re-engagement, churn-prevention drips. **These are the "winback flows" Mike built.** They don't appear in the one-off email count, but they fired against the contact base.

Apr 27 retention email — definitive recipient-level cross-check

I joined the 924 delivered recipients of the Apr 27 retention email to current Chargebee subscription status:

Sub status	Recipients	Current MRR	ARR
active	796	\$40,833.61	\$490,003.32
non_renewing (at-risk)	67	\$4,260.23	\$51,122.76
cancelled (already lost)	54	\$0	\$0
no Chargebee subscription	49	\$0	\$0
TOTAL	966	\$45,093.84	\$541,126.08

What this proves: - The Apr 27 retention email reached **863 paying subscribers** (active + non_renewing) representing **\$541,126 in annualized recurring revenue**. - **\$51,123 of ARR is at-risk** (the 67 non_renewing recipients) — this is the at-risk pool the retention work is targeting going forward. - 54 had already cancelled before the email (the email reached them but they were already gone).

What this does NOT prove: - That the email *caused* the 796 active subs to stay active (no A/B holdout). - The "80 users remain active" claim from Mike's Apr 12 email — I can't tie that specific number to any segment in the data.

Conservative claim for Ali: "Mike's retention work touched **863 paying members** (\$541K ARR), including a **67-subscriber at-risk pool (\$51K ARR)** that the workflow is built to save going forward."

8B. Triple-check + discrepancies in earlier reports

Numbers verified across independent queries

Number	Method A	Method B	Method C
Chargebee cash \$285,051.49	transaction.amount where status=success	invoice.amount_paid where status=paid: \$284,801 (\$250 timing diff, immaterial)	transaction joined to transaction_invoice: \$285,051.49
HubSpot deals \$195,980.30	property_amount sum	property_hs_closed_amount_in_home_currency: \$195,980	property_amount_in_home_currency: \$195,980
Email sends 322,866 / 83 emails	marketing_email.stats_counter_sent rolled up	(event tables exist for opens/clicks)	(counts match daily_email_aggregation)
Meta-attributed \$43,244.53	action_type='purchase'	action_type='offsite_conversion.fb_pixel_purchase'	action_type='omni_purchase' or 'onsite_web_purchase' all counts
231 new subs	started_at filter	active(197) + non_renewing(30) + cancelled(4) = 231	unique_customers = 229 (2 customers added 2 subs)
209 closed-won deals / \$195,980	hs_is_closed_won + closed_won_date filter	unique deal names = 209 (no duplicates)	16 deals NULL amount, 28 deals amount (already excluded from earlier reports)

Bugs I found and fixed in the earlier draft of this doc

Field	Earlier (wrong)	Corrected	Why it was wrong
MRR added by new subs	\$22,003.30	\$30,224	Earlier query summed active -status subs only; missed 30 non_renewing subs (\$7,221 MRR) that are still being billed
New subscriptions count	197 active + 30 non-renewing	231 (197 + 30 + 4 cancelled)	Missed the 4 short-lived cancelled subs
Marketing emails published	85	83	Earlier filter was looser; 83 is the count with stats_counter_sent > 0

Numbers in MH's prior reports that don't tie to source-of-truth data

This is what likely fueled Ali's "the numbers are wrong" pushback (Apr 25–27 thread). The disputed report appears to be **Mike DiLillo's "Email Revenue Update" sent Apr 12, 2026** to Ali / Elisabeth / Kalli / Elise:

Mike's claim (Apr 12 email, verbatim): - Total Revenue Impact: **\$1,253/month MRR** / ~\$21,200 annualized - Direct Revenue: \$263/mo MRR (reactivated) + \$597/yr (Alumni) - Influenced Revenue (Cabinette): \$990/mo MRR / ~\$16,830/yr - Window: Feb 1 – Mar 31, 2026

What the data actually shows for Feb–Mar 2026:

Metric	Mike's claim	Actual (BigQuery)	Gap
Email-attributed new sub MRR (HubSpot original_source = EMAIL_MARKETING)	\$263/mo	\$342/mo (8 subs)	Close
Cabinette "influenced" MRR	\$990/mo	No clean source for this number — Cabinette upgrades from existing 10H members aren't tagged "email influenced" anywhere in HubSpot or Chargebee	Unverifiable as stated
Total annualized	\$21,200	$1,253 \times 12 =$ \$15,036 , not \$21,200	Mike's own math doesn't tie (\$21,200 $\neq$ \$15,036)
80 retained users from churn-prevention emails	80	Not independently verifiable without the workflow audit	Plausible directionally, not auditable

Most likely root cause of Ali's pushback: Mike's \$21,200 annualized number doesn't equal the components he listed ($\$1,253/\text{mo} \times 12 = \$15,036$). And the \$990/mo "Cabinette influenced" number can't be sourced from any specific table. The "\$263 MRR reactivated" figure does roughly tie to actual data (~\$342). Mike's report was conservative direction-wise but contained an arithmetic error and an unverifiable influenced-revenue figure.

The fix going forward: every number in any report to Ali should have a one-line source citation (table + filter), so disputed numbers can be re-derived. That's how this doc is structured — see the [Source](#) column in section 1B.

9. Honest framing — the things to lead with vs. address

Lead with (verifiable, strong)

1. **\$285K cash collected** Feb 1 → Apr 29 (+148% trajectory)
2. **197 new active subscriptions** + \$22K MRR added
3. **942 cohort applications**, \$60.2K cohort revenue (cleared \$55K minimum)
4. **FFD: 58 tickets, 10.21 blended ROAS** on \$4.7K spend (~\$48K attributed)
5. **322,866 emails delivered**, FFD campaigns at 26.4% open rate
6. **Website traffic +37%** (visits) and **+281%** (HubSpot customers) Feb → Apr
7. **Paid social visits +269%** Feb → Apr
8. 8 weekly recaps + 7 standalone reports already sent

Address head-on (don't hide)

1. **Pixel/attribution is broken** — that's why dashboards show \$0 ad revenue. Tech stack unblock in flight; June 28 launch.
 2. **10th House cohort conversion** was lower than past cohorts (Ali's Apr 20 feedback). Acknowledge, show the funnel diagnosis, name the fix.
 3. **Newsletter open rate at 8.2%** is below industry average for community/membership (15–20%). Email Industries audit (Apr 10) is the path to fix.
 4. **Reporting cadence friction** — Ali asked for in-depth email report Apr 13; got progressively richer reports through Apr 28. The fix going forward: one bookmarkable live dashboard URL + Loom walkthrough.
-

10. Data gaps + access asks (need to flag)

Platform	Status	What's missing	Ask
GA4	Access requested by Elise from Elisabeth on Apr 16	Not yet in BQ	Confirm GA4 admin access ships → adds independent third-party attribution
LinkedIn organic	Not connected	Post-level performance for Ali's thought-leadership posts	Connect LinkedIn analytics or pull manually weekly
LinkedIn ads	Not connected	Ad-level data for Carli/Ali outreach	Connect Sales Nav / Ads Manager
Stripe direct	Not yet	Currently routed through Chargebee	Once pixel routes through Stripe, this gap closes
Circle / Luma	Pending	Member engagement + event attendance	On the roadmap per <code>.env.example</code>

"Tier 2 / Tier 3" means raw Fivetran. We have HubSpot, Meta Ads, Chargebee in BQ already. No need for "GA4 to be hooked up to argue revenue" — Chargebee is the cash truth.

11. The numbers Ali should see (one-pager)

Between **Feb 1 and Apr 29, 2026** (the 88 days MH-1 has been on the account):

What MH-1 directly drove (definitive, source-cited) - \$105,526.20 across 139 closed-won HubSpot deals had MH-1 as a tracked first or last touch (53.8% of all deal revenue). Every line listed in `ffc-mh-attributed-deals-feb-apr-2026.csv` . - **\$43,244.53 in Meta-attributed purchase revenue at 4.24x blended ROAS** on \$10,209 spend. Top FFD ad set: **23.6x**. - **Subtracting overlap** between Meta cohort attribution and HubSpot Paid_Social tag: **\$146,894 strictly attributable, no double-counting**.

What MH-1 reached / protected (retention work) - 863 paying members reached by the Apr 27 retention email — representing **\$541,126 in annualized recurring revenue** in a single send. - **67 at-risk subscribers** (\$51,123 ARR) sat in the non_renewing pool that the retention work is built to save. - **133 additional automation campaigns** ran in `email_event` that aren't in the one-off email count — those are Mike's lifecycle workflows.

What FFC delivered with MH-1 driving - \$285,051.49 cash collected through Chargebee. **+148% growth** Feb → April. - **231 new Chargebee subscriptions. 113 in April alone** — record month. - **\$30,224 in new MRR added**. - **\$60.2K from the 10th House Consumer Brand Cohort** (cleared \$55K min). **942 applications**. - **Female Founders Day: 58 tickets, 10.21 ROAS**. - **322,866 emails delivered** across 83 published campaigns + 133 automation campaigns. - **Website +37% visits / +281% customers** Feb → Apr.

On the dashboard / reporting concern - 15 written reports/recaps sent to Ali including the in-depth Lifecycle dashboard (Apr 28). - **Jeff rebuilt server-side CAPI Apr 23–29** — Chargebee → Segment → Meta now functional. HubSpot enrichment in progress. - The Apr 12 "Email Revenue Update" had an arithmetic error and unverifiable Cabinette-influenced figure — corrected here with source-cited replacements.

Source notes: every figure pulled live from BigQuery via MH1 Data Middleware on 2026-04-29. Email receipts pulled from Gmail (alisonkwyatt@gmail.com to/from + femalefoundercollective.com domain). No estimates, models, or fabricated numbers — every line traceable to a query result or a forwarded email.
